PROFESSIONAL SUMMARY

CCNA-certified IT professional with 6+ years across help desk, endpoint support, and infrastructure projects in multi-site environments. Led the network and low-voltage buildout for a corporate HQ relocation involving Cisco Meraki and SG500 switching, UniFi wireless, 32-drop structured Cat6 cabling, 12-camera IP surveillance, and Keri Systems access control, delivered on schedule with zero downtime. Day-to-day strengths in Active Directory administration, Microsoft 365, Google Workspace, and network troubleshooting.

CORE SKILLS

Identity & Directory: Active Directory user/group/OU administration, Group Policy design, MFA, onboarding/offboarding workflows, Google Workspace admin, IAM

Cloud & Productivity: Microsoft 365 administration, Exchange Online mail flow, Teams admin, SharePoint permissions, AWS (IAM, EC2, S3, CloudWatch)

Networking: Cisco Meraki, Cisco SG500-series switches, Ubiquiti UniFi wireless, TCP/IP, DNS, DHCP, VPN, VLANs, firewalls, network troubleshooting

Scripting & Administration: PowerShell (variables, loops, arrays, CSV import/export, admin scripting), command-line troubleshooting

Linux & Virtualization: Linux user/group management, file permissions, package management, services, log review; Ubuntu Server, VirtualBox, Windows Server lab environments

Cabling & Physical Infrastructure: Cat6 cable runs and termination, patch panel build/test, structured cabling, network testing, rack and device installation

Endpoints & Systems: Windows 10/11, ServiceNow, Microsoft System Center, Sophos, network printers, hardware/software troubleshooting, asset tracking

Physical Security & AV: Reolink and Amcrest IP cameras, Blue Iris NVR, Keri Systems access control/alarm systems, conference room AV

Operations: IT project leadership, site relocation, vendor coordination, disaster recovery, technical documentation

CERTIFICATIONS

- Cisco Certified Network Associate (CCNA) - Earned March 2023; valid through 2029

PROFESSIONAL EXPERIENCE

Information Technology Technician | CBM of America, Carrollton, TX

November 2023 – April 2026

- Provided Tier 2 support and project work for a ~250-user, multi-site environment, owning escalations involving Active Directory accounts, network devices, and endpoint issues.
- Administered user accounts in Active Directory and Google Workspace, including password resets, account unlocks, group membership changes, mailbox/email account management, and access adjustments.
- Administered the Microsoft 365 environment: created users, assigned licenses, configured Exchange Online mail flow, managed Teams policies, and maintained SharePoint permissions.
- Designed and modified Group Policy objects and OU structure to support security and access control across multiple sites.
- Owned user onboarding and offboarding end-to-end, coordinating account provisioning, equipment readiness, access assignment, and timely deprovisioning to support security and compliance.
- Supported and troubleshot network-connected systems including Cisco switches, firewalls, Ubiquiti UniFi access points, network printers, and IP cameras across multiple business sites.
- Participated in disaster recovery planning and testing, including backup verification, recovery exercises, and procedure documentation.
- Maintained technical documentation for support procedures, network/device changes, and project work to improve consistency and knowledge transfer.

Key Project: Corporate Headquarters Relocation | Network and Infrastructure Lead

- Led end-to-end IT buildout of a new 15-user corporate headquarters from kickoff through cutover, delivering the 4-month project on schedule with zero downtime.
- Configured a Cisco SG500-52MP switch and connected all networked devices; tested existing building patches and cabling, terminated 32 new Cat6 drops, and built/tested new patch panels.
- Deployed 3 Ubiquiti UniFi AC Pro access points and installed the UniFi controller on a dedicated server for centralized wireless management.
- Installed and configured 12 Reolink and Amcrest IP cameras and stood up a server running Blue Iris for centralized recording and management.
- Oversaw installation of a networked alarm and access control system managed through Keri Systems software on a dedicated server.
- Set up individual offices and the conference room, mounted TVs, configured network printers, and validated end-user connectivity before go-live.
- Decommissioned the previous site network and coordinated equipment moves, transitions, and vendor activity for a seamless cutover.

IT Help Desk Technician | Webhelp, Irving, TX

March 2020 – November 2023

- Served as primary point of contact for technical support, resolving user issues by phone, email, and remote support tools in a high-volume environment.
- Used Active Directory to verify domain memberships, unlock accounts, reset passwords, and validate user identities during support requests.
- Created and managed tickets in ServiceNow to document incidents, track progress, and ensure timely issue resolution.
- Leveraged Microsoft System Center to remotely support employee workstations using elevated administrative rights.
- Used Sophos administration tools to verify and manage user access to designated systems.

Machine Operator / Mailroom | Harland Clarke, Grapevine, TX

February 2017 – March 2020

- Operated production mail-processing equipment in a high-volume manufacturing environment while maintaining throughput, quality, and safety standards.

Repair Technician | SMS Infocomm Corporation, Grapevine, TX

August 2011 – January 2017

- Installed, modified, and repaired computer hardware and software components.
- Performed motherboard repair, testing, and component-level work using through-hole and surface-mount soldering methods.

TECHNICAL LABS & PORTFOLIO PROJECTS

PowerShell Scripting Lab

- Developed a system inventory script using Get-CimInstance, variables, arrays, and loops to collect hostname, IP address, OS version, and serial number; exported results via Export-Csv for administrative reporting.
- Built a CSV-driven device inventory tool (Devices.csv → DeviceReport.ps1 → DeviceReportOutput.csv) using Import-Csv, foreach iteration, try/catch error handling, and structured CSV output; documented with inline comments and a README.

Linux Server Fundamentals and Troubleshooting Lab

- Completed Ubuntu Server LTS administration covering filesystem navigation, user/group management, file permissions (chmod, chown), package management (apt), service control (systemctl), and log review (journalctl).
- Documented a side-by-side comparison of common Windows Server and Linux operational tasks to support faster cross-platform troubleshooting.

Cloud Administration Fundamentals Lab - Azure, Entra ID, Intune, and AWS

- Built foundational cloud administration skills across Microsoft Azure and AWS in Free Tier environments, configuring identity, compute, storage, network security, and monitoring services.
- Azure/Entra ID: created users and groups, enforced MFA, deployed an Azure VM in a virtual network, and reviewed RBAC and the Intune admin center. AWS: configured IAM users/groups with least-privilege policies, deployed an EC2 instance and S3 bucket, applied security group rules, and reviewed CloudWatch monitoring.

EDUCATION

Networking Diploma | Brookhaven College, Farmers Branch, TX

May 2017
