PROFESSIONAL SUMMARY

CCNA-certified IT support and infrastructure professional with 6+ years across IT support, help desk, and hardware repair. Hands-on experience leading IT infrastructure work for a corporate headquarters relocation — including network buildout (Cisco Meraki, Cisco SG500 switch, Ubiquiti UniFi wireless, structured Cat6 cabling, patch panels), IP camera and alarm systems, and end-to-end site setup. Day-to-day responsibilities include Active Directory and Google Workspace administration, network device support, endpoint troubleshooting, onboarding/offboarding ownership, and disaster recovery participation in a multi-site, 100–500 user environment. Building deeper systems administration skills through structured home-lab work in Active Directory, Group Policy, and Microsoft 365. Targeting Systems Administrator, Network Administrator, Network Support Engineer, and Infrastructure / IT Engineer roles.

CORE SKILLS

Identity & Directory: Active Directory (users, groups, OUs, password resets, account unlocks, group membership), Google Workspace admin, Group Policy basics, MFA, onboarding/offboarding workflows

Cloud & Productivity: Microsoft 365 administration basics, Exchange Online, Teams admin, SharePoint permissions, Google Workspace (mail, users, groups)

Networking: Cisco Meraki, Cisco SG500-series switches, Ubiquiti UniFi wireless, modems/ONT, TCP/IP, DNS, DHCP, VPN, VLANs, firewalls

Cabling & Physical Infra: Cat6 cable runs and termination, patch panel build/test, structured cabling, network testing, rack and device installation

Endpoints & Systems: Windows 10/11, ServiceNow, Microsoft System Center, Sophos, network printers, hardware/software troubleshooting, asset tracking

Physical Security & AV: Reolink and Amcrest IP cameras, Blue Iris NVR, Keri Systems access control / alarm, conference room AV, TV mounting

Operations: IT project leadership, site relocation, vendor coordination, disaster recovery participation, technical documentation

CERTIFICATIONS

- Cisco Certified Network Associate (CCNA)
- CompTIA A+

PROFESSIONAL EXPERIENCE

Information Technology Technician | CBM of America, Carrollton, TX

November 2023 – April 2026

- Provide tier-2 support and project work for a 100–500 user, multi-site environment, owning escalations involving Active Directory accounts, network devices, and endpoint issues.
- Administer user accounts in Active Directory and Google Workspace, including password resets, account unlocks, group membership changes, mailbox and email account management, and access adjustments.
- Own user onboarding and offboarding processes end-to-end, coordinating account provisioning, equipment readiness, access assignment, and timely deprovisioning to support security and compliance.
- Support and troubleshoot network-connected systems including Cisco switches, firewalls, Ubiquiti UniFi wireless access points, network printers, and IP cameras across multiple business sites.
- Participate in disaster recovery planning and testing, including backup verification, recovery exercises, and documentation of procedures and lessons learned.
- Maintain technical documentation for support procedures, network/device changes, and project work to improve consistency and knowledge transfer.

Key Project — Corporate Headquarters Relocation (Network and Infrastructure Lead):

- Oversaw end-to-end IT buildout of the new corporate headquarters, including ISP turn-up (modem/ONT), Cisco Meraki deployment, switch configuration, wireless coverage, physical security, and full office setup.
- Configured a Cisco SG500-52MP switch and connected all networked devices; tested existing patches and cables in the building, terminated new Cat6 runs where needed, and built and tested new patch panels.

- Deployed and configured Ubiquiti UniFi AC Pro access points and stood up the UniFi controller on a server to centrally manage the wireless environment.
- Installed and configured Reolink and Amcrest IP cameras and stood up a server running Blue Iris to manage and record camera feeds.
- Oversaw installation of a networked alarm and access control system managed via Keri Systems software on a dedicated server.
- Set up individual offices and the conference room, mounted TVs, configured network printers, and validated end-user connectivity prior to go-live.
- Decommissioned the previous site's network and coordinated equipment moves, transitions, and vendor activity to ensure a smooth cutover with minimal business impact.

IT Help Desk Technician | Webhelp, Irving, TX

March 2020 – November 2023

- Served as a primary point of contact for technical support, resolving user issues by phone, email, and remote support tools across a high-volume environment.
- Used Active Directory to verify domain memberships, unlock accounts, reset passwords, and validate user identities during support requests.
- Created and managed tickets in ServiceNow to document incidents, track progress, and ensure timely issue resolution.
- Leveraged Microsoft System Center to remotely support employee workstations using elevated administrative rights.
- Used Sophos administration tools to verify and manage user access to designated systems.

Machine Operator / Mailroom | Harland Clarke, Grapevine, TX

2017 – 2020

- Operated production mail processing equipment and supported mailroom operations in a high-volume manufacturing environment.
- Followed structured production, quality, and safety procedures while maintaining throughput targets and equipment reliability.

Repair Technician | SMS Infocomm Corporation, Grapevine, TX

August 2011 – December 2017

- Installed, modified, and repaired computer hardware and software components.
- Performed motherboard repair, testing, and component-level work using through-hole and surface-mount soldering methods.

HOME LAB PROJECTS

Active Directory Administration Lab

- Built a Windows Server Active Directory lab to practice user and group administration, OU design, password resets, account unlocks, and group-based access control.
- Created organizational units for departments and workstations, provisioned test users and security groups, and tested account lifecycle tasks including disable/enable and membership changes.
- Configured and tested a basic Group Policy object to understand policy scope, OU linkage, and user/computer policy application.

Microsoft 365 Administration Lab

- Practiced Microsoft 365 user lifecycle tasks including test user creation, license assignment, group setup, shared mailbox concepts, and admin-center navigation.
- Enabled and validated MFA on test accounts and documented secure onboarding and offboarding workflows.
- Built familiarity with Exchange Online, Teams administration basics, and SharePoint permissions concepts aligned to systems and network support roles.

EDUCATION

Networking Diploma | Brookhaven College, Farmers Branch, TX

May 2017
